CAREER AUDIT & RESUME OPTIMIZATION REPORT

Comprehensive Institutional ATS Evaluation, Skill Gap Analysis & Verified Learning Plan

Candidate: kamaljit (kamaljit444501@gmail.com)
Audit Date: November 7, 2026
Target Role: Agentic AI Intern
Status: Verified Analysis

1. ATS Optimization Scorecard

Automated resume parsing engine alignment test (Jobscan & Workday calibration)

58 / 100

OVERALL ATS SCORE

Rating: Needs Optimization

Critical optimization required. High drop-off risk on enterprise applicant tracking systems due to format and metric deductions.

TECHNICAL EVALUATION CRITERION	SCORE / MAX	RATING	EVALUATION BASIS & DEDUCTIONS
Core Technical Skills Match	18 / 25 pts	**72% (Adequate)**	Add missing modern agentic
Measurable Impact & Quantified Metrics	8 / 20 pts	**40% (Deduction)**	Add specific business or
Experience Alignment & Tenure	10 / 15 pts	**67% (Adequate)**	Elaborate more on ongoing
Action Verbs & Linguistic Precision	7 / 10 pts	**70% (Adequate)**	Avoid passive phrasing in
Project Complexity & Code Links	8 / 10 pts	**80% (Strong)**	Ensure exact hyperlinks to live
ATS Formatting & Parsing Robustness	4 / 10 pts	**40% (Deduction)**	Remove multi-column or
Education & Credentials	3 / 5 pts	**60% (Adequate)**	Low academic CGPA (5.59) may
Contact & Online Footprint	0 / 5 pts	**0% (Deduction)**	Ensure all profile URLs are fully

2. Priority Actionable Fixes (High-Impact Recommendations)

Practical, clear adjustments to resolve parsing penalties and improve recruiter screening

[CRITICAL PRIORITY #1] **Missing Quantifiable Numbers (Metrics & Scale)**

Impact: Automated screening algorithms heavily downrank resumes lacking measurable results (approx. 14 points deducted).

Action: Use the XYZ Formula: Accomplished [X], measured by [Y], by doing [Z]. Add metrics like % latency drop, $ revenue, or active

[HIGH PRIORITY #2] **Target Role Tech Keyword Gaps**

Impact: Missing vital technologies drops keyword density below competitive recruiter thresholds (approx. 10 points deducted).

Action: Explicitly mention core modern frameworks, databases, and cloud tools for your target role in your project and experience

[MEDIUM PRIORITY #3] **Passive Action Verbs in Experience Bullets**

Impact: Phrases like 'Responsible for' reduce candidate authority in automated parsing (approx. 5 points deducted).

Action: Start every single bullet point with strong engineering action verbs (e.g. 'Engineered', 'Optimized', 'Architected',

[LOW PRIORITY #4] **Non-Standard Section Headings**

Impact: Uncommon header names cause enterprise ATS parsers to misclassify or skip sections.

Action: Stick to industry-standard headers: 'Work Experience', 'Technical Skills', 'Education', and 'Projects'.

3. Skill Gap & Market Competency Audit

Identified strengths vs high-demand market competencies required for your target role

VERIFIED MATCHED RESUME STRENGTHS

TypeScript · React · Node.js · Git · REST APIs

CRITICAL HIRING GAPS DETECTED

Multi-Agent Orchestration Frameworks (LangGraph, CrewAI, AutoGen) · Vector Databases & Retrieval-Augmented Generation (Pinecone, Qdrant, Weaviate) · LLM Observability & Evaluation (LangSmith, Arize Phoenix, Ragas)

Detailed Competency Gap Action Items:

[TECHNICAL SKILL] Multi-Agent Orchestration Frameworks (LangGraph, CrewAI, AutoGen) High Priority

Hiring Friction: While the candidate understands generic 'AI Agents', top industry roles require explicit experience with industry-standard

Prescribed Fix: Build a multi-agent project using LangGraph or CrewAI where specialized agents collaborate to solve a complex pipeline

[TECHNICAL SKILL] Vector Databases & Retrieval-Augmented Generation (Pinecone, Qdrant, Weaviate) High Priority

Hiring Friction: Agentic workflows rely heavily on long-term memory and context retrieval. Lack of dedicated Vector DB experience creates a

Prescribed Fix: Integrate Qdrant or Pinecone into a Streamlit app to give your Gemini API agents persistent long-term memory via hybrid

[TECHNICAL SKILL] LLM Observability & Evaluation (LangSmith, Arize Phoenix, Ragas) High Priority

Hiring Friction: Agents can loop indefinitely or hallucinate. Employers look for candidates who know how to trace, evaluate, and benchmark

Prescribed Fix: Set up LangSmith or Phoenix tracing in your projects to monitor agent tool usage, step latency, and token consumption.

4. Global Salary Benchmarks & Market Compensation (2026)

Verified compensation tiers across leading regions and remote employment markets

Ø<ß United States (US Tier 1 / Silicon Valley / NYC)	$115,000 – $165,000 / year	Senior / High Demand
Ø<ß European Union / United Kingdom (UK / Germany)	€75,000 – €110,000 / year	Competitive Mid-Senior
Ø<ß Global Remote / Cross-Border High-Growth	$85,000 – $135,000 / year	Remote Top 10% Talent
Ø<ß India & South Asia Tech Hubs (BLR / HYD / NCR)	₹18,00,000 – ₹38,00,000 / year	High-Velocity Product Firms

5. 4-Week Career Sprint Execution Plan

Week-by-week implementation milestones, practical projects, and core deliverables

WEEK 1 **Vector Databases & Context Management Foundations**

Goal: Complete sprint core technical deliverables

Hands-on Project: Production code deliverable

- **[SKILL]** Understanding Vector Embeddings (10h) - Learn the mathematics and practical application of generating and comparing
- **[SKILL]** Setting up Qdrant and Pinecone (12h) - Deploy and configure vector databases, perform CRUD operations on vectors, and

WEEK 2 **RAG & Long-Term Memory Integration**

Goal: Complete sprint core technical deliverables

Hands-on Project: Production code deliverable

- **[SKILL]** Implementing Advanced RAG Pipelines (15h) - Build RAG pipelines with chunking strategies, re-ranking, and context
- **[PROJECT]** Streamlit App with Persistent Memory (15h) - Integrate Qdrant or Pinecone into a Streamlit app to give your Gemini API

WEEK 3 **Multi-Agent Orchestration Frameworks**

Goal: Complete sprint core technical deliverables

Hands-on Project: Production code deliverable

- **[SKILL]** Mastering LangGraph State Machines (15h) - Learn how to define nodes, edges, state schemas, and conditional routing
- **[SKILL]** Role-playing Agents with CrewAI (15h) - Understand how to assign distinct roles, goals, and backstories to agents to

WEEK 4 **Complex Multi-Agent Pipelines**

Goal: Complete sprint core technical deliverables

Hands-on Project: Production code deliverable

- **[PROJECT]** Code Reviewer + QA Tester Agent Pipeline (20h) - Build a multi-agent project using LangGraph or CrewAI where
- **[SKILL]** Self-Correction and Reflection Mechanisms (15h) - Implement feedback loops and self-correction patterns to prevent

WEEK 5 **LLM Observability & Evaluation**

Goal: Complete sprint core technical deliverables

Hands-on Project: Production code deliverable

- **[SKILL]** Setting up Tracing and Monitoring (12h) - Set up LangSmith or Phoenix tracing in your projects to monitor agent tool
- **[SKILL]** Evaluating RAG and Agentic Responses (12h) - Learn how to quantify faithfulness, answer relevance, and context recall

WEEK 6 **Capstone Project & Portfolio Polish**

Goal: Complete sprint core technical deliverables

Hands-on Project: Production code deliverable

- **[PROJECT]** End-to-End Observable Multi-Agent System (25h) - Combine multi-agent orchestration, vector memory, and full
- **[CAREER]** Showcasing Agentic AI Projects (10h) - Draft compelling project case studies highlighting architectural decisions, latency
